This was a comparator at rank A. The group considered this would be more appropriately described as good to very good, rank B. Its citations analysis shows that only 14.47% of papers are at the 25th centile for A/A\* venues in this area. Its google scholar h5 index is 25, where the 20th venue in this category is 55. The median h-index of the pC is 16, with 11 of 24 being established researchers. However of these 11, only 3 have published there in the last 5 years, and only 1 of them in a 2nd year, so weak engagement. They are publishing in strong venues with the most popular being Infocom (A\*). It is 18th in Aminer listing in this area, which is also not indicative of A. It will be reranked to B.
