

2021 4611 Committee

Geoff Webb (Monash University)

Chang Xu (The University of Sydney)

Ben Rubinstein (The University of Melbourne)

Ling Chen (University of Technology Sydney)

Peter Flach (University of Bristol)

ICML was reviewed because it was provided as a comparator conference for ICLR and IJCNN. Hence the review used the data submitted by ICLR and IJCNN together with data obtained from the proceedings, Google Scholar and Scopus.

The Google Scholar h5-index of 171, the standing of the chairs, the high proportion (approximately 60%) of established researchers in the senior program committee, the acceptance rates of 23 to 26% over the years 2017 to 2019 and the reputation of the conference all indicated a rank of A*.

This was supported by its China Computer Federation rank of A.

One member of the committee absented themselves from the vote due to potential for perceived conflict of interest.

The remaining committee was unanimous in assessing that ICML should retain its current rank of Exceptional (A*).
