Conflicts of Interest

Lina Yao, strong, Managed by exclusion from all processes on this submission

Decision

Conference to be ranked/tagged as C

Justification

Factors less supportive of C ranking

- strong researchers involved as Chairs
- whilst the program committee is primarily junior, it contains a sizeable fraction of established researchers (n=65, roughly one third)
- good volume of submissions (198 submitted in 2022 and 116 submitted in 2021)

Factors more supportive of C ranking

- citation and h-index centiles are below the average C level
- median h-index of PC is 9 { a more junior level
- acceptance rate was high (53%) in 2021 (however 38% in 2022)
- no strong participant or area leader information provided
- no Google h5 index available
- modest participation at the conference by established researchers from the PC (25/46)

ADMA seems best characterized as regional, being held mostly in China until 2016, with an extension to Australia and once in Singapore over recent years.

Whilst ADMA has a number of strong researchers involved as Chairs, and involved as a fraction of the PC, there is also a high proportion of junior researchers in the PC and there isn't any other information about strong participant/area leaders being involved. ADMA's citation performance has also been below average C level. So the overall decision is to place it at ranking C.
