CSE conferences to be ranked next round

As part of the activities of the new international ICORE initiative, the European partners proposed to extend the ranking scope to conferences whose main focus is in computer systems engineering. To this aim, ICORE has added a new research area to the traditional CORE FoRs. A new area committee will cover this research area, named Computer System Engineering (CSE for short). The CSE research area includes the following subfields of research.

- Computer Architectures

- VLSI Testing and Dependability

- VLSI Design

- Embedded and Cyber-physical Systems Design

- High Performance Computing

- Architectures for Industrial Informatics

- Robotics Architectures

- Quantum Computing Engineering

Some key conferences of CSE have been added already to the conference database and will be ranked in 2025 for the 2026 ranking (subject to a submission being received). These conferences have previously been ranked by our European partners in GGS, which can be accessed at the following URL https://scie.lcc.uma.es
