Summary Argument:

This conference is one of the oldest conferences (started in 1974) in the area of HCI and is a unique venue merging Human Computer Interaction issues with Software Engineering ones. The conference has evolved over the year (including its name) which might have impacted its visibility from engines.

The historical view has been provided in the attached file.

More details on the conference and the steering committee can be found here <http://eics.acm.org/>

Additional Notes

The reviewing process is very thorough and detailed. The conference adopts a revise and resubmit process with shepherding by one of the programme committee member. The venue is very selective and allows authors to submit long papers (beyond the recommended 10 pages).

Selection of papers is done during a physical programme committee meeting.
