Submission requested a B. The committee decided to retain its rank at C. There is no H5-index for the conference, one of the co-located conferences has an H5-index of 13. PC chairs h-index ranges from 10-30. Average H-index of PC members is really low (9), with many junior or emerging researchers. The number of submissions ranges from 157 to 220, with acceptance rates range from 18% to 22%. There is not much information available to justify a B-ranking (no Aminer rank, no CCF information). Selected top researchers who published in the venue have h-index from 49 to 107, but most of them attend the conference only occasionally. Only 4 out of 25 top PC members publish in the venue. According to the number of published papers, IC3K is their 4th most popular choice over selected conferences. Other venues where they publish range from A-conferences to unranked conferences. Comparing with DaWak and EKAW, it is claimed that IC3K chairs have comparable h-index, but the comparison does not provide justification that the rank should be the same.
