A submission was made to re-rank the MDM conference from rank C to rank A. After assessing the provided data indicators, the panel agreed to rerank it on rank B. The conference has a reasonable acceptance rate of 27-29% (with about 80 submissions in total) and very senior conference chairs (h-index ranges 28-84); PC membership is well mixed with an average h-index of about 18 and half of the PC being senior researchers (having an h-index of at least 18 in Scopus) who publish themselves however not too frequently in MDM (only 16 of 54 senior PC members published in MDM in 2 or more years). There are however some strong researchers publishing here regularly: according to the submission, the top-10 publishing researchers in MDM have an average h-index of 73.4, and published 54 papers in MDM in 2015-2019, in average in 2.2 of those 5 years, which is quite good. According to Google Scholar, the h5-index for this conference is 20. This puts it close to rank A, but the citation centile data from Scopus is too weak, with only 13.56% of MDM papers in 2017 having citation counts in the 50th centile of A*/A conferences, so clearly below the average for top conferences. The h-index centiles are similarly low (just 20% of the papers in the 50th centile of A*/A conferences wrt. h-indexes). MDM is one of the few conferences sponsored by IEEE TCDE; another example being ICDE which is however clearly stronger than MDM. No top people report was provided.
