Lin Padgham (chaired the process)

This conference was on the list of conferences to be reviewed and was asked to make a submission, but unfortunately nothing was received. It is being reviewed on the basis of a comparator report and some other available data.

Conference size appears to be around 30+ papers - counted 32 and 34 in contents list for 2020 and 2018 respectively.

It is a bi-annual conference, published in a book series. The median h-index of the PC is 12, with 6 of 38 members being established researchers. 3 of these established researchers published there, but only one of them in a 2nd year. It has only 4.47% of papers at the 25th centile for citations in A/A\* conferences in theory.

All indications suggest this should be ranked B rather than A.
