This conference requested reranking from B to A, but this was not considered justified by this group. Citations analysis is poor with only 3.13% of papers at the 25th centile for A/A\* publications in the theory area, and only 31.25% at the 50th centile. Analysis of h index of authors is also well below A/A\* averages. The PC median h-index is 16 with 32 of 75 PC members being established researchers. 12 of these had published there, but only 4 of them in more than 1 year. Its GS h5 index is 17. Unfortunately the submission did not provide any of the optional information regarding involvement of strong people. The group agreed there was insufficient positive information to justify reranking to A
